Summary

Software engineering graduate focused on full-stack web development: React and Next.js frontends backed by FastAPI, .NET and PostgreSQL. Helped take North Carolina's math placement test online for a program that has served 859,000+ students, and currently building a job application tracker end to end.

Education

East Carolina University Aug 2022 – May 2026
B.S. Software Engineering, Concentration in Mobile/Web Development *Greenville, NC*
- GPA: 3.1 | Relevant coursework: Web Development, Database Systems, Cloud Computing, Software Engineering Principles

Projects

NC Early Math Placement Test – Online Platform (Senior Capstone) | *.NET, C#, JavaScript, Google Cloud*
- Helped move NC EMPT (ncempt.org), a state math placement test that has served 859,000+ students, from paper to an online platform used by NC colleges and universities (5-person team)
- Built session-code login for proctors, so each test administrator can see and control only the students in their own exam session
- Built the student and teacher score reports generated after each test, and set up the database for student, test and results data
- Extended the .NET backend and JavaScript frontend deployed on Google Cloud

Job Application Tracker (In Progress) – GitHub | *Next.js, FastAPI, PostgreSQL, Docker*
- Building a full-stack app where users paste a job link to auto-fill the company and role, then drag applications across a pipeline board
- Wrote a FastAPI REST API backed by PostgreSQL (in Docker), with user accounts, hashed passwords and backend tests
- Added daily follow-up reminders sent by email over SMTP, plus search and CSV export

Personal Portfolio Website | *HTML, CSS, JavaScript*
- Designed and built a portfolio site with an in-browser editor for updating content and links

Experience

Umiya Dec 2024 – Present
Server *Raleigh, NC*
- Train new staff at an all-you-can-eat sushi and hotpot restaurant
- Gave feedback on the design of the restaurant's website, drawing on my web development coursework
- Support other servers by delivering food to their tables and keeping utensils restocked

Technical Skills

Languages:	Python, JavaScript, TypeScript, C++, C#, SQL, Rust
Frontend:	React, Next.js, HTML, CSS
Backend & Data:	Node.js, FastAPI, .NET, REST APIs, PostgreSQL, MongoDB
Cloud & DevOps:	Google Cloud, Docker, Kubernetes, CI/CD, Git
