Summary

Full-stack software engineer with 2 years of hands-on project experience. My focus is frontend work, and I'm also comfortable with APIs, databases and server-side logic. I build backend systems and frontend applications that are productive and dependable. I'm looking for a team where I can build and ship efficient, well-tested software and keep learning from strong engineers.

Education

East Carolina University Aug 2022 – May 2026
B.S. Software Engineering, Concentration in Mobile/Web Development *Greenville, NC*

- Relevant coursework: Web Development, Database Systems, Cloud Computing, Software Engineering Principles

Projects

NCEMPT-3 – Early Math Placement Test (Capstone) | *.NET, C#, JavaScript, Google Cloud*

- Worked on a 5-person team to move NC EMPT (ncempt.org), a state math placement test that has served 859,000+ high school students, from paper to an online platform used by NC community colleges and UNC universities
- Built the proctor sites that test administrators use to run and monitor exam sessions
- Set up the database for student, test and results data, and built the score reports generated after each test
- Improved the .NET backend and JavaScript frontend on Google Cloud, and handed the platform off to the next capstone team

Job Application Tracker – Live Demo | GitHub | *Next.js, FastAPI, PostgreSQL, GitHub Actions*

- Built and deployed a full-stack app (Next.js on Vercel, FastAPI on Render, PostgreSQL on Neon) where users paste a job link to auto-fill the company and role, then drag applications across a pipeline board
- Secured accounts with hashed passwords, required email confirmation and a lockout after 5 failed logins, and blocked private network addresses in the link lookup
- Sent branded HTML confirmation and follow-up reminder emails over SMTP, plus search, CSV and calendar export, and response-rate stats
- Set up GitHub Actions CI to run backend tests and a production build on every push, and added a one-click demo with a sample board

Personal Portfolio Website | *HTML, CSS, JavaScript*

- Designed and built a portfolio site with an in-page editor so the content and links can be updated and the HTML downloaded straight from the browser

Technical Skills

Languages:	Python, JavaScript, TypeScript, C++, C#, SQL, Rust
Frontend:	React, Next.js, HTML, CSS
Backend & Data:	Node.js, FastAPI, .NET, REST APIs, PostgreSQL, MongoDB
Cloud & DevOps:	AWS, Google Cloud, Vercel, Docker, Kubernetes, CI/CD (GitHub Actions), Git
Practices:	Software design, testing, scalability, maintainability
